

Revision 1.4 · Product working draft · 14 August 2026

1. Outcomes

Reduce checkout abandonment for returning customers while keeping guest checkout available. Consolidate contact, delivery, and payment confirmation into a clear review step. The checkout must remain usable on mobile and desktop.

2. Functional requirements

PR-01 A customer can complete checkout as a guest.

PR-02 A returning customer can review the order, delivery address, and payment choice before placing an order.

PR-03 The payment step must support card payment through the hosted payment provider.

PR-04 Show a clear confirmation and an order reference after successful authorization.

PR-05 Preserve the shopping cart when a customer returns to checkout within the same session.

3. Experience & acceptance

PR-06 Show payment method, masked details, total, tax, and delivery estimate together on the final review.

PR-07 Validation errors must identify the affected field and preserve other valid checkout values.

PR-08 Support a screen-reader accessible keyboard flow through delivery, payment, and order placement.

PR-09 The confirmation state must be clear if payment authorization succeeds but order creation needs a retry.

Success measures

? Reduce checkout abandonment by 12% for returning customers.

? Keep payment authorization errors below the current baseline.

? Do not regress guest checkout conversion.

Open product question: which payment details, if any, may be retained to support a faster returning-customer experience? Confirm with Compliance before launch.
